Canter lever awning 5100x2200

Canter lever awning 1200x900

Canter lever awning 4400x2600

Canter lever awning 13600x1450

When you don't want Poles a cantilever awning is the solution
We custom make aluminum cantilever arms and a frame and fix them to the wall

They can be as wide as you like and projected from 600mm up to 2.6m. then we build the polycarb twin wall roof on top

The polycarbonate sheets are joined with a H Bar. Each panel is 725mm centre to centre. So 2 sheets start at 1500mm wide and then simply add 725mm for each panel to determine the width you need and we can cut the sheets to fit any size needed.

The sheets are a 8mm thick twin wall polycarbonate. This Design with an air pocket in the middle which reduces the noise and in the solar colours reduces the heat as well. Each twin wall polycarb Panel Has a rubber seal around the perimeter to stop water leaks and it lets the polycarb expand and contract without any noise

The twin wall polycarb sheets are UV protection on both sides of the sheets for greater protection. The Polycarb comes in Solar Ice, Solar Metal, Gray, Bronze and Clear. Solar Ice is the most popular colour Solar Ice and Solar Metal are the ones which will reduce the heat

The standard colors for the Frame are White, Primrose and Black .We can custom powder Coat as well
We have the full range of powder coat colours from Dulux and Interprun
